Reliable and dependable performance.

KTM Mecafrance Ball Valves

Innovative, high quality ball valves offering lasting, dependable service.

Isolation Valves for utilities to the most extreme industrial conditions

As part of the Final Control portfolio, Emerson's isolation valve products provide a complete range of standard and customized solutions, whatever demand you have on a valve.

Meeting Your Needs

Working with one trusted partner, we'll help you take the complexity out of the procurement arm and ensure compatibility of technologies. In terms of your projects, as a single manufacturer, we can positively impact timing and delivery and on the lifecycle side, we bring an expanded range of services at the site level.

KTM Mecafrance Series RA World Class Ball Valves

KTM Mecafrance ball valves set the industry standard, designed to last longer, extend cycle life and lower the cost of ownership. KTM Mecafrance is part of the Emerson portfolio of Final Control products. At Emerson we understand the importance of keeping your process running continuously, regardless of the conditions, which is why we are dedicated to providing the highly reliable technologies that will help you control, regulate and isolate your process with absolute certainty.

With a reputation for high quality and world class innovation, KTM Mecafrance ball valves are used by the major process industries round the world. Each valve is precision manufactured from foundry casting or forgings to final assembly. Total quality control for every component is maintained from start to finish ensuring KTM Mecafrance ball valves provide long lasting, dependable service.

At Emerson, we offer our customers not only the most comprehensive range of products, technologies, and services in the industry, but the confidence that comes from working with a single-trusted-partner.

So, when you need a premier global valve business that will help you operate safely, improve reliability, and optimize plant performance, just think Emerson.

Series RA Designed around your needs

Series RA Ball Valves

The Series RA is a three-piece ball valve with swing-out center section for easy seat and gasket replacement. It is available as full and reduced bore with a cast body in either carbon or stainless steel, the ISO top flange allows for easy automation.

Connections:

Butt weld, socket weld, threaded ends and flanged version

Size range: DN 8 - DN 200

Pressure range: PN10 - PN100, ANSI 150/300

Temperature range: -50°C to +400°C For details see pages 14 and 15

Metal Seated Valves

Series RA ball valves are also available with metal seats for corrosive and abrasive services at elevated temperatures up to 400°C. These can be fitted in all standard KTM Mecafrance 3-piece ball valves without further modifications. For details see pages 18 and 19

Cryogenic Service

The series RA is available for cryogenic services at temperatures to -196°C with 150 or 300 mm extensions (other lengths on request). They can also be supplied to comply with EN 1626 (on request).

Connections:

Butt weld, socket weld, threaded ends and flanged versions

Size range: DN 8 - DN 150

Pressure range: PN10 - PN100, ASME 150/300 mono-directional

Temperature range: -196°C to +80°C For details see pages 20 and 21

Manual Operators

KTM Mecafrance ball valves are available with a range of manual operators, including high and low-profile handles and a locking version. They can also be supplied with a spring return handle (dead man's handle) as either spring to open or spring to close, with a double inside stop to avoid injury. For details see pages 22 and 23.

In-line maintenance

The Series RA has a single bolt removal swing-out design, with ISO 5211 type centers for simplified in-line maintenance of all internal parts. Single bolt removal also minimizes pipe twisting or distortion during maintenance. Larger valves use a similar lift out feature.

Automated Valve Solutions

Emerson can supply you with a fully engineered, integrated and configured automated ball valve from a single source. Emerson will manage, administer and produce your automated valve and as we manufacture all the components required we are totally responsible and accountable for the solutions we supply.

Having one supplier will minimize risk and commissioning complexities, whilst also ensuring on-time delivery and project certainty.

Series RA Suitable for a range of applications

KTM Mecafrance ball valves are suitable for most applications from industrial and utilities to heavy-duty working conditions, including corrosive or hazardous services. In addition to the standard product, valves are available for specific applications.

Hazardous Areas

The series RA is available with a specially designed Anti-Static device suitable for environments with ATEX area classifications. Valves can be supplied with A2 marking, suitable for installation in all zones 1 & 21 and zones 2 & 22 (according to the ATEX Directive 1999/92/EC annex II). Max. temperature +150°C. Control accessories can also be mounted

on actuators and solenoid connections that comply with VDI/VDE 3845. Please enquire for further details.

Pressure Equipment Directive (97/23/EC PED)

Series RA valves and actuators are available to comply with the most stringent requirements of the European Directives and harmonized standards including Pressure Equipment Directive (97/23/EC PED). This includes:

- Valves certified to module H of PED, allowing applications up to and including category III (the highest category for industrial valves, table 6 of the PED annex II)
- Actuators falling under article 3, paragraph 3 of the PED which are produced in an environment certified to both ISO 9001 and PED module H

Series RA 3-piece ball valve Exploded view

Ball valve series RA with reduced bore DN 15 - DN 50; CBS/CSW/CBG

Ball valve series RA with reduced bore DN 15 - DN 50; CBF (option)

Series RA Function

Ball Sealing

The principle of the ball valves lies in the use of a ported spherical ball, which is rotated between two seats normally made of PTFE. The seats have flexible lips designed so that the ball, when rotated, follows the spherical contours of the port way. This floating bearing permits movement in the direction of flow, thereby ensuring optimal sealing of the port way.

Figure 1: in the absence of pressure, a proper seal is assured in that the spring action of the seats presses the sealing lips to the ball; the sealing lips' contact area with the ball is the same on both the upstream and downstream sides.

Figure 2: pressure increases on the upstream side move the ball slightly towards the seat on the downstream side, increasing its pressure against the seat on the downstream side. The seats are designed so that the increase in pressure of the ball on the downstream seat results in all increase in the surface contact area, thus preventing any leakage. In addition, such a pressure increase decreases the pressure against the sealing lips on the upstream side. As a result, the operating torque for the valves remains constant throughout the valve's entire pressure range.

Sealing the Stem

Figure 3: The stem of the KTM Mecafrance ball valve is fitted from inside. A collar, which is larger than the bore in the body, keeps the stem from being pressed out even under extreme internal pressures. The seat washer inside the stem provides the primary seal. Any increase in the internal pressure automatically increases the pressure on the stem collar which, in turn, raises the pressure on the seat seal and the tightness to the outside. For the depressurized state and vacuum mode, the seals are tightened with the secured stem nut acting on Belleville spring washers and a stem seal follower; this prevents any leakage. During the vacuum mode, the situation is reversed to the evacuated side.

Body Seal

A specially formed PTFE ring, the body gasket, provides the seal to the outside between the body gaskets and the opposing flange.

The KTM Mecafrance fire-safe design use a tongue and groove connection sealed with temperature-resistant graphite material. High temperatures cause the PTFE seat to vaporize; this, in turn, causes the floating ball to be pressed against the sealing lip during pressure equalization. This results in a metallic linear seal of very high specific are pressure and great reliability. The stem, which has been fitted from inside, is prevented from being pushed out by means of its collar. Even if the PTFE steam seals are destroyed, the collar is still pressed against the turned face in the duct, and the tightness increases as the pressure rises.

Both the ball and the stem are sealed off by a metal-to-metal seal if the valve is closed in case of a fire.

Notes

- RB = reduced bore
- FB = full bore
- Operating torque in Nm, in clean water at room temperature
- For the actuator torque, multiply above value by 1.5
- For non lubricating media, please add 20% to the torques specified

Notes

All dimensions are related to reduced bore valves. For full bore valves please apply the dimensions of the next diameter (except L3, ØD, ØD6, D7 and ØD8 which is identical in both instances)

L2

Threaded: CBG

Metal Seated

The metal sealing system and the graphite sealing systems are fully interchangeable with the standard PTFE systems for series RA ball valves. No further modifications to the valve body or ends pieces are required making these designs extremely versatile

RA DN 40 with metal seats

Metal seat type

Metal Sealing System

For the metal sealing system, Tungsten Carbides are sprayed at ultrasonic speeds, in cold condition, on the surfaces of the ball and seats. As no catalysts or additives are applied the surface layer is of a 100% homogeneous structure, resulting in optimum protection of the underlying materials. Seats and ball are then ground, polished and lapped for a perfect match. Ball and seats are a complete set. The seats are loaded with graphite Belleville washers ensuring a bi-directional tight shut off performance.

This unique, high-quality sealing system can be applied on all abrasive applications such as granulate transport, water glass, PTFE powder transport, pulp handling, polymerizing MMA, phosphate powder transport, sugar production, and wet steam.

3-piece ball valves

DN 20 - DN 100 full bore / DN 25 - DN 150 reduced bore High temperature applications up to 400°C.

Technical Details

- For dimensional details refer to Series RA valves with carbon and metal sealing systems
- Stainless steel and carbon steel bodies
- Metal sealing system:
- Titanium stabilized stainless steel ball and seats (DIN 1.4571)
- Tungsten Carbide layers applied on ball and seat surfaces
- Seats are axially compressed with graphite washers
- Maximum temperature: 400°C (for higher temperatures contact your local KTM Mecafrance representative)
- Maximum pressure rating: PN40 in function of temperature and valve size

- Bi-directional gas tight shut off performance due to optional lapping process
- Can be installed in standard KTM Mecafrance ball valves: No modifications required
- Excellent chemical and abrasion resistance
- The unique sealing system can be installed in all standard KTM Mecafrance 3 piece ball valves without modifying the end pieces or body. In this way standard PTFE seats can be replaced with this solution.

Notes

* Full bore

- Please always verify maximum body ratings as each above mentioned diagram presents data for the seat material only
- For other material options, please contact your nearest KTM Mecafrance representative

Cryogenic valves DN 8 - DN 40 full bore DN 15 - DN 50 reduced bore

3-piece ball valves with ISO top flange, series RA-Cryo Butt weld, threaded, socket weld and flanged version.

RA 66 CYTC - DN 65

Design Features

- Reduced and full bore options available
- Stainless steel trim
- Forged end connections
- Integrated ISO 5211 top flange for easy automation
- Wide variety of seat material options available
- Temperature range: -196°C to +80°C
- Higher temperate available as an option using TFM4215 material.
- Pressure balancing hole in upstream side of the ball
- Scalloped seat design

Dimensions (mm)

- DN 15 DN 65 in compliance with EN 1626 (on request)
- Cryo extensions to be mounted uniquely vertically
- Pressure rating: maximum PN100 in function of valve size and seat material selection
- Valve design according EN 13445
- Valves are degreased according EN 12300
- Valves are individually packed in polyethylene bags
- Size range: DN 15 DN 150: RA version

	36	6	Screw

No.	Qty	Description
38	1	Spring
39	1	Lower part of housing
40	1	Upper part of housing
41	1	Control shaft

Type indication: BHM

Advantages

- The ISO interface enables the use of standard mounting kits
- The torque can be changed through a differentiated pre-tensioning of the spring. In this way, the KTM Mecafrance spring return handle can be used for different nominal diameters
- The double stop on the inside avoids the risk of injury and, through its form stability, it ensures that the switching radius of 90 is adhered to
- A grease filling in the housing prevents spring corrosion
- The compact closed housing rules out the possibility of any foreign particle infiltration, which could affect the function of the KTM Mecafrance spring return handle
- It can easily be assembled on Series RA KTM Mecafrance ball valves even after valve is in service
- It can be used in either of the two switching positions, 'spring to close' or 'spring to open'
- The spring return handle must be operated fully open or fully closed. Intermediate positions can damage the seats and prevent proper operation of the spring return handle when returning to the original position so they must, therefore, be avoided.

Design features

Α

• Action: spring-to-open, spring-to-close

□14

- Double inside stop avoids risk of injury
- Maintenance free due to internal grease filling
- Compact, closed housing guaranteeing functionality

D4 ØD2

 $\overline{\otimes}$

- To be mounted on RA valves
- ISO interface enabling standard mounting kits
- Maximum valve size: DN 50 reduced bore, and DN 40 full bore (TFM1600, PTFE or RTFE seats)

Connection details

Applications

- Safety device
- Loading and unloading of dangerous media
- To avoid unintentional use of the valve
- All valves which are operated only for short period of time

Manual operators

For Series RA DN 15 - DN 65, high profile cast stainless steel handle with integrated locking device

For Series RA

DN 80 - DN 200, adjustable tube version stainless steel handle (Option: bolt-on pad lock provision)

For Series RA DN 15 - DN 50, stainless steel extension with bakelite balls, type RP

(Germany only)

For Series RA DN 15 - DN 50, round carbon steel handwheel (Germany only)

For Series RA DN 15 - DN 50, oval carbon steel handwheel

For Series RA DN 15 - DN 50, oval stainless steel handwheel

Approvals and Certification

KTM Mecafrance retains the following approvals and certificates

- 1. Design to EN 13445 / EN 12516 / EN 10213
- 2. Testing to EN 12266-1/2
- 3. ISO 9001 (Development, construction, production, mounting and service)
- 4. Deliveries according AD 2000 A4
- 5. TA-Luft according VDI 2440
- Type approval for transportation according EN14432/ 2014 Acceptance criteria: Dir 2010/35/EU in compliance with ADR/RID 2017
- Type approval for cryogenic ball valves/ Standard ball valves: Dir 2010/35/EU in compliance wirh ADR/ RID and EN 1626: 2008
- 8. Fire tested according to EN ISO 10497-2010, API 607 5th Ed., API 6FA 3rd Ed.

- 9. Certificate CU-TR 010 and CU-TR-032
- 10. Declaration of compliance with regulation EN 1935/2004, material and articles intended to come into contact with food
- 11. Anti-Static according VGF
- 12. Oxygen service according BAM VBG 62
- 13. Safety integrity level (SIL) for use in safety related loops FMEDA approved SIL level
- 14. CE-certification by TÜV Rheinland: CE 0035 Module H
- 15. ISO 14001
- 16. ISO 18001
- 17. OHSAS 18001
